Wayne Township Goes Live in NJ with ProPhoenix

Wayne Township, NJ- Tuesday July 19th, the Township of Wayne Police Department successfully went live with a number of applications from the Phoenix Software Suite. With a population of 54,069 and 119 sworn officers, Wayne now utilizes ProPhoenix's browser-based Records Management, Computer Aided Dispatch, Wireless Digital Assistant Mobile for Police, with various state and 3rd party interfaces. Choosing the right software is critical to the law enforcement agencies, such as identifying qualities that drive efficiency, effectiveness, and protection for the community at large.

The integration of the Phoenix software suite will greatly benefit the Police officers of Wayne Township with a central repository of information and tools which include everything the officers need to "serve and protect." Through the Citizen Services website, the community will have access to information such as crime statistics, crime reporting, accident report downloads, and road closure alerts, effectively creating a safer and secure community.

We are very happy to have Wayne Township as our user in New Jersey. Their suggestions and cooperation during the implementation phase were extremely important to a successful go live.

We are also very proud to be a part of the exemplary service and commitment Wayne Township's public safety agencies provided to the community in the aftermath of Hurricane Irene. Our hats are off to them on a job well done!
