

FOR IMMEDIATE RELEASE:

ProPhoenix is the Next Generation Public Safety Software for yet another multi-jurisdiction in Walworth County, WI and Elkhorn Police Department, WI

Walworth and Elkhorn, Wisconsin - November 13, 2011 – The County of Walworth and the Elkhorn Police Department in Wisconsin, are now utilizing ProPhoenix Public Safety Software. With a population of over 102,000 this large jurisdiction needed public safety software that could help them achieve their maximum public safety potential.

Undersheriff Kurt Picknell of the Walworth County Sheriff's Office states, "Walworth County's Sheriff's Records Management Software (RMS) project was demanding. The objective was to select a single software company that produced the capability of efficiently collecting and processing data from our entire operation, and - more importantly- allow for the immediate evaluation of pertinent information in the office or on the street".

The Walworth County Sheriff's Department includes 82 Sworn Officers, 105 Correctional Officers, and total of 220 Support Staff personnel. With such a large population, Phoenix's CAD, WDA, RMS, Mobile, and report writing functionality were the answers Walworth County had been looking for.

Undersheriff Picknell says, "ProPhoenix's software has delivered functionality and records sharing performance that allows us to leverage the Sheriff's operation to be data driven and, equally important, timely. This translates directly into enhanced law enforcement and public safety services delivered to the citizens of Walworth County."

Walworth and Elkhorn, Wisconsin are both using County CAD/RMS and the Corrections Management System (CMS), along with several interfaces. Phoenix CAD offers a powerful, easy to use interface which manages everything from call acceptance to dispatching units to call logging. Information taken in CAD is instantly transferred to the appropriate locations in RMS. Phoenix RMS is a powerful, browser-based, and fully integrated product, allowing for easy access to all records within the agencies system. All information like names, arrest history, and much more, can be accessed from multiple modules within the software. Phoenix Corrections Management System (CMS) can work with RMS, or as a stand- alone product. CMS tracks, and records all inmate activity from intake to release. It can be configured to share information, avoiding necessity of double data entry, while offering flexibility to the user.

ProPhoenix is thrilled to welcome Walworth County and the Elkhorn Police Department of Wisconsin on board.
